

The internet can be pure fun,

but your security can't be played with!

Browsing with safety on the internet became one of the top priorities. Therefore, we call your attention to some important tips on how to use it in a safe way:

1st - Use video-call as a confirmation of the other person's identity.

2nd - Don't post personal information. If doing so, avoid personal data from being stolen.

3rd - "Think twice" before you write anything, send photos or videos to unknown people.

4th - Be careful with fake news! Always check if the source is trustworthy.

5th - Don't post, don't like, don't leave a comment and neither share messages, photos or videos that could sadden, humiliate or prejudice someone.

6th - Protect your passwords, because they are secret and only yours. If you share them, you can put your personal data and informations at risk.

7th - Warn your parents or family if you are going through any type of virtual aggression.

8th - Spending too much time on the internet can be harmful for your health. Therefore, try to exercise, talk, dance, distract your mind! There is no problem being "offline"!

9th- We can make a lot of friends on internet, but if someone asks you to keep secrets, access unknown links or send pictures, do ask your parents for help.
